Introduction

Title

ERC HornEast data classification scheme

Dates

2017-2022

Producer

ERC HornEast project

(LOISEAU Julien, AMBU Martina, AYEANACHEW Deresse, BARBE Maryasha, BOUDERBALA Sobhi, CHEKROUN Amélie, DORSO Simon, HIRSCH Bertrand, LABADIE Damien, LAGARON-KHALIFA Anna, MELLAL Lamia, OLLIVIER David, REFAAT Shahista, VALIVA Nafisa).

Material significance

128,7 Gb digital archives

Physical location

Mediterranean House of Human Sciences (*Maison méditerranéenne des sciences de l'homme - MMSH*).

Access conditions

The data is partially accessible on the open archive platforms HAL, MédiHAL and Nakala. All the data is deposited in the Huma-num servers, under the responsibility of the project director Julien LOISEAU. The paper archives (standard documents) is accessible at the MMSH.

Terms of use

The data deposited in open access is placed in the anticipated public domain of the Creative Commons CC0 - C BY NC ND paternity - no commercial use - no modification, with the exception of the maps and plans, placed under copyright.

Evaluation, sorting and eliminations

Duplicates have been eliminated, data involving privacy, underage or bearing an appreciation or value judgment, or showing the behavior of a person in conditions likely to harm him (*Code du patrimoine, art. L213-2, 3°*) are kept on Huma-num's servers, but not freely accessible.

Producer history

The ERC HornEast project (Horn & Crescent. Connections, Mobility and Exchange between the Horn of Africa and the Middle East in the Middle Ages) is a Horizon 2020 research and innovation program of the European Union (as part of the grant agreement no. 726206). Started in 2017 and ending in 2023, the project aims to document the relationships between Christian societies in the Horn of Africa (Ethiopia, Nubia) and their Islamic environment at local and regional scales (Egypt, Palestine, Arabian Peninsula), in order to better understand the modalities of the Islamization process at work in the region during the medieval millennium (7th – 15th century). It is composed of researchers in the humanities and social sciences and hosted by Aix-Marseille University.

Content type

The data is obtained through field observations, survey results, interview recordings and photographs. A part was collected thanks to prospecting and archaeological field work which led to the discovery of several sites containing inscriptions (stelae), dwelling places (pottery), which benefited from both scientific analyzes intellectual and laboratory dating (C14 dating). The data

also contains documents produced for scientific events (communications, workshops) as well as publications by project members.

Increase

Data classification plan with growth perspective.

Classification scheme: the project data is classified into 8 sub-parts*:

- publications;
- scientific events;
- archaeological documentation;
- photographs;
- maps and plans;
- fields notebooks;
- Cnrs Image;
- data management tools.

** The classification plan can increase and be modified before the end of the project.*
